Category	Craft	Requirements	Details
Tools	Axe	x1	Use to chop down trees and fight
	Pickaxe	x2	Use to mine mineable objects
	Hammer	x2	Use to deconstruct structures
Science Machine	Shovel	x2	Use to dig up plants or objects, and fight
	Hammer	x2	Use to deconstruct structures
	Pickaxe	x2	Use to dig up turfs and fight
Alchemy Engine	Razor	x2	Use to shave your beard and beafalo
	Lumpy Axe	x2	Use to chop down trees and fight
	Magical Shovel	x2	Use to dig up plants or objects, and fight
	Opulent Pickaxe	x2	Use to mine mineable objects

Recipe	Ingredients	Requirements	Notes
Apple Pie	Apple, Flour, Sugar, Butter, Eggs	Science Machine	...
...

Want a decadent keto chocolate treat? Well, there's no such thing as too much chocolate with this keto double chocolate brownie, featuring cocoa and dark chocolate. It's a great dessert for a party, but they'll go in a flash so be sure to save a few for you!

Medium US Metric 1261224364824 servings 6 oz. 170 g butter, softened 1/3 cup (3 oz.) 80 ml (85 g) almond butter 3 large egg large eggs 1/4 cup (5 1/2 oz.) 180 ml (160 g) erythritol 1/3 cup (1 oz.) 80 ml (30 g) cocoa powder 1 cup (4 oz.) 240 ml (110 g) almond flour 1/2 tsp 1/2 tsp baking powder 1/4 tsp 1/4 tsp salt 2 tbsp water 1 tsp 1 tsp vanilla extract 1/2 tsp 1/2 tsp instant coffee powder (optional) 1 oz. 28 g dark chocolate with a minimum of 80% cocoa solids, chopped

Nutrition Net carbs 1g 4% Protein 3g 9% Fat 11g 86% Fiber 1g Total Carbs 3g www.dietdoctor.com Making low carb simple Recipes Desserts Keto brownies Preheat oven to 350°F (175°C) degrees. Line a 9" by 13" (23 x 33 cm) baking dish with parchment paper. Use a hand mixer or stand mixer to combine the butter, almond butter, eggs, and sweetener. Mix well until the sweetener is thoroughly incorporated. Add the cocoa powder, almond flour, baking powder, salt, water, vanilla extract, and instant coffee powder and stir until smooth. Lightly mix in the chopped chocolate bar. Pour the mixture into the baking dish and smooth with a spatula. The batter will be thick. Bake for 25 to 28 minutes or until just set. Do not overbake or the bars will be dry. Let cool for 20 to 30 minutes before cutting. For a less sweet brownie you can reduce or eliminate the erythritol sweetener. For an even more decadent dessert, serve with unsweetened whipping cream, beaten to soft peaks. Store covered in the refrigerator to prevent drying out. Add ingredients to see what they make. Add items in your inventory to see your options. Stats about your food: With these, you can make: Find what recipes are most efficient: This is an unofficial tool to help avoid starvation in Don't Starve, an uncompromising wilderness survival game full of science and magic, by Klei Entertainment, available on Steam. This tool requires a modern web browser and is officially supported in recent versions of: Chrome/Chromium (and mobile), Firefox, Safari (and mobile), and Edge The food and recipe database should be current as of the Unleash the Quacken update, February 25th 2016. About Don't Starve Food Perish time is the time before a food item becomes Rot. Halfway through this period, it will go stale, and give health and hunger, as well as no sanity. Food spoils at three quarters, giving only hunger and no longer giving any health. Eating spoiled food will decrease sanity by . Food dropped on the ground will perish at a rate of (or in Winter, in Summer), while keeping it in the Ice Box will reduce the rate to . Foods that provide warmth or cooling work like a thermal stone; when eaten, they provide a heat source at a particular temperature for a period of time. Eating another heating/cooling food within this period will replace the earlier effect. Recipe priority determines which recipe a food combination will make; only the highest-priority possible recipes can be produced by a batch of ingredients. In recipe requirements, cooked/uncooked usually doesn't make a difference. If it does, then only the valid form will be listed. About DLC and Don't Starve Together Which foods and recipes exist in each version of the game gets a little complicated. For this reason, there are buttons in the upper-left that let you switch modes for a game. Click on a badge to switch to the mode for that game; you can also right-click on badges to toggle their individual recipes and ingredients on and off. Simulator The Simulator works like a Crock Pot: add items, and it will tell you what food will be prepared. Note that only the highest-priority recipes will be candidates when actually cooking in-game. The combined totals at the top reflect the ingredients added, where perish time is the shortest. The suggestions below the real results show what recipes could be made by adding different items to those already in the Crock Pot. Discovery The Discovery tab is finds what recipes can be prepared using a collection of ingredients. It doesn't take item quantity into account, instead assuming you have four of each. You are also able to calculate efficient recipes using your ingredients to get the most health or hunger benefit from cooking them in the crock pot. This works identically to the Statistics Analyzer tab, but limited to your inventory. Statistics Analyzer The Statistics Analyzer tab is for those who just want to explore ingredient combinations. It will calculate every valid ingredient combination possible (using an "ideal" ingredient selection, generally excluding uncooked food) and allows filtration by recipe and ingredient contents. Computation may take some time on slower computers. Links Food Guide Change Log Report Food Guide Bugs or Issues Don't Starve Official Website Don't Starve on Wikia
